

Download the GOLDCUT software driver here: [http://www.uscuttersupport.com/downloads/Drivers/goldcut\\_driver.zip](http://www.uscuttersupport.com/downloads/Drivers/goldcut_driver.zip)

Your GOLDCUT vinyl cutter will install as a printer and should be set to use an available Virtual Serial Port (ie: USB 001 or 002). You can check this by right clicking on the GoldCut printer icon from your computer's control panel and selecting **Printer Properties**, then **Ports**.

**STEP #1:** Go to the **Cutter** menu, Select **My Cutter** then **Manage Cutters** . Select "USCutter" Brand, then "MH" Model and click the "Add to List" button, then click "Done".

**STEP #2:** Add some basic artwork to your workspace. Be sure your cutter's pressure/force is to 100, and the speed set to about 500. If your cutter came with a pen, you might also want to insert it and load just a regular piece of paper to begin testing with.

**STEP #3:** Click on the Scissors icon to open the Cut Settings dialog. Before we send the design to the cutter, be sure the Model is set to "MH", the connection type is "Printer" and that you have the "GoldCut JK Series" port selected. Now click "Cut".
