INK COMPATIBILITY

1 Waze 50/50 is a white/black perforated window film designed for one-way vision printing, commonly used in vehicle window graphics. The 50/50 hole pattern is the most popular choice for this application. The film is applied to the exterior of the window, with the printed graphics facing outward and the black, see-through side facing inward. It's clear, solvent acrylic adhesive is specially formulated for easy installation, even in low temperatures (40 degrees and above), providing strong adhesion and allowing for quick and clean removal when needed.

STANDARD SIZES
