

ColorPrint® Extra PU

ColorPrint® Extra PU introduces a new formula based on a polyurethane composition which is different from its PVC based predecessor. This not only allows for CPSIA certification, but also leads to a thinner, softer, and more flexible material when compared to the original ColorPrint® Extra HTV. ColorPrint® Extra PU is perfect for nylon surfaces as well as some lightly coating silicone-based fabrics.

Application Instruction:

1. Print and Cut design based on recommended material
2. Weed excess material from your design
3. Mask your design with the recommended TTD Mask
4. Squeegee masked design starting from the middle of the design to the edge
5. Remove the design from the backing paper
6. Apply design based on the recommended application settings

ColorPrint® Extra PU Applies to:

- Nylon
- Leather
- Canvas
- 100% Cotton
- 100% Polyester
- Poly/Cotton Blend
